

By a stream

In a desert

In an open forest

On a playground

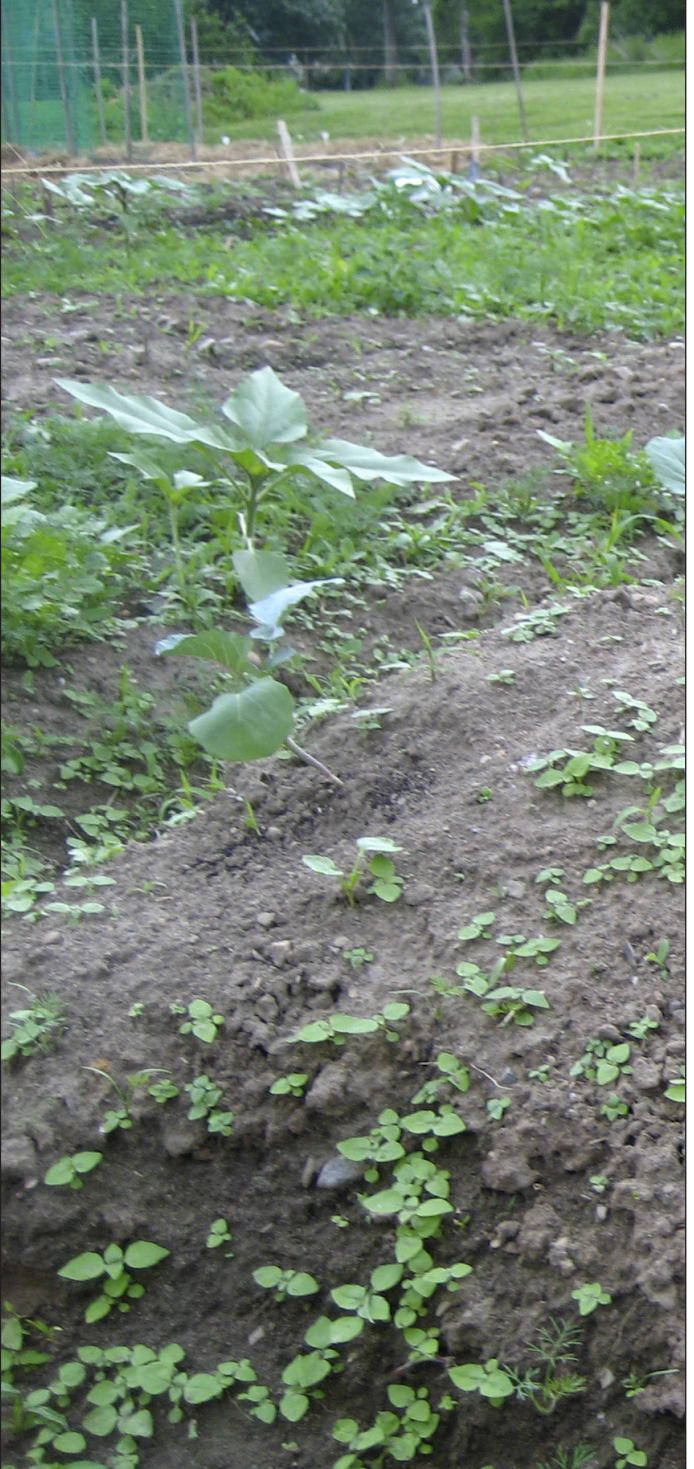

Dune grasses hold sand down.
Then other plants can grow there.

What happens when people
crush dune grass?

Flowers and vegetables grow in gardens. Weeds grow there, too. What happens if people do not pull them out?

Flowers and vegetables can not grow well with too many weeds.

**These trees are growing on a tree farm.
Weeds are growing, too. The weeds take nutrients
from the soil that could help the trees grow.**

**The farmer must be careful. The weed killer can also
hurt the trees.**
